

I support XM satellite radio. I urge you to reject NAB's petition 04-160. I firmly believe in true competition. If the broadcast radio networks cannot provide the entertainment that XM provides, let the listening public determine what they want to be entertained by. If there is competition that is hurting broadcast radio, then start with television or CD players in your effort to eliminate competition. Satellite radio is to broadcast radio just as Television is to broadcast radio. We are not talking about monopolistic practices here, but rather, true competition.
